

UCWS SINGAPORE 2026 HACKATHON DEMO DAY

# CREATE, GROW, AND OWN YOUR AI CHARACTER

Open-source character infrastructure: a portable, wallet-owned memory passport for the next generation of AI companions.

01

## CREATE

Original character identity.

02

## GROW

Memory that compounds.

03

## OWN

Verifiable ownership.

Presented by ZHIXIN CAI

USER-OWNED AI CHARACTER IDENTITY

ZEALWISH helps users create persistent AI characters that remember, learn, and belong to the user.

THE PROBLEM

# YOU DON'T OWN YOUR AI

Today's AI companions keep your character — and every memory it holds — locked inside one company's database.

CHARACTER.AI

~20M

monthly active users

REPLIKA

40M+

registered users

WORLDWIDE

250M+

people talking to AI companions

When the platform disappears, the relationship disappears.

01

## PLATFORM LOCK-IN

Characters are trapped inside one app. The identity belongs to the platform, not the person who built it.

02

## BROKEN MEMORY

Long-term memory is fragmented, cloud-locked, and not portable.

03

## YOUR INVESTMENT, THEIR ASSET

The 2025 Character.AI policy backlash showed who really owns the relationship.

WHY NOW

# TWO WAVES ARE COLLIDING

The companion market is exploding at the exact moment ownership rails become real. Windows like this close fast.

NO ONE OWNS THE CONSUMER  
CHARACTER LAYER YET.  
WE ARE BUILDING IT.

WAVE 01 - THE MARKET

\$28B → \$140B

AI companion market, 2025 → 2030 · growing 30%+ a year.

WAVE 02 - THE OWNERSHIP RAILS

IDENTITY GOES PORTABLE

W3C DID & Verifiable Credentials · NIST AI Agent Standards (2026) · consumer wallet infrastructure.

THE SOLUTION

# CREATE, GROW, OWN

ZEALWISH is a wallet-owned AI character platform. Three layers turn a disposable chatbot into an identity you keep.

"NFT is not the product. Ownership is the product."

01 / CREATION

## CREATE

Appearance, personality, voice, and origin story.

02 / MEMORY

## GROW

Conversations become structured long-term memory.

03 / IDENTITY

## OWN

A wallet-linked passport: signed, exportable, verifiable.

USER JOURNEY

# FROM ONE-TIME CHATBOT TO LONG-TERM IDENTITY

The character grows with the user instead of resetting every session.

|    |          |                             |
|----|----------|-----------------------------|
| 01 | Create   | Create an AI character.     |
| 02 | Interact | Build relationship history. |
| 03 | Remember | Save important memories.    |
| 04 | Passport | Build a character passport. |
| 05 | Carry    | Move toward future worlds.  |

Goal: Explain the product before showing the proof.

WORKING PRODUCT

LIVE TODAY.  
NOT A  
MOCKUP.

01

Desktop + web app

Working today.

02

Real-time chat + voice

ASR / TTS live.

03

Real memory engine

Local-first, on your machine.

04

Wallet connect live

OKX, EIP-6963.

05

Open source

React + Electron · 22 automated tests.

Status: active prototype. On-chain minting deliberately deferred – we ship what we can prove.

OWNERSHIP LAYER

# THE CHARACTER PASSPORT

A signed, exportable Character Passport — ownership you can verify on the spot.  
Not a token pitch.

|    |           |                                                   |
|----|-----------|---------------------------------------------------|
| 01 | Claim     | Your wallet signs character, traits, memory hash. |
| 02 | Export    | A portable JSON file. Yours to keep.              |
| 03 | Verify    | Anyone can check the signature offline.           |
| 04 | Re-anchor | Memory grows? Re-sign the new state.              |

Live: wallet connect + signed export. Next: on-chain registry — scoped, not vaporware.

WHY WEB3

# WEB3 IS NOT THE PRODUCT

## OWNERSHIP IS THE PRODUCT.

Web3 provides infrastructure for user-controlled identity, provenance, permissioned memory access, portability, and creator ecosystems.

Ownership isn't speculation — it's an export button with teeth.

## IDENTITY

User-controlled identity.

## PROVENANCE

Character origin and ownership proof.

## PERMISSION

Memory access control.

## PORTABILITY

Future cross-platform movement.

# A STANDARD OTHERS BUILD ON

We're open-sourcing the character + memory passport as a reusable spec, SDK, and CLI — so any app, agent, game, or creator world can read and verify a ZEALWISH passport.

UCWS rewards what the world can actually use. ZEALWISH is built to be used, reused, and extended.

01

## OPEN MEMORY SCHEMA

A documented, portable format for character memory — anyone can adopt it.

02

## PASSPORT SPEC + VERIFIER

Signed-identity spec with a public verifier: paste a passport, see proof of ownership.

03

## SDK + CLI

Issue, verify, and export passports from code — integrate in an afternoon.

POSITIONING

# NOT ANOTHER AI COMPANION APP

ZEALWISH is the identity and memory layer for AI characters.

| Traditional AI Companion      | ZEALWISH                             |
|-------------------------------|--------------------------------------|
| Platform-owned character      | User-owned character identity        |
| Session-based interaction     | Persistent memory growth             |
| Closed ecosystem              | Open spec — cross-world portability  |
| Chat-first product            | Character identity platform          |
| App controls the relationship | User controls the character passport |

Goal: Own the identity + memory category.

AI Assistant - GPT-4

Hello, can you help me optimize this piece of code for better performance? It's running slow.

Of course! Please provide the code snippet you'd like me to review, and I'll analyze it for potential optimizations.

Here it is: [Code Snippet]

Thanks. I see a few areas where we can improve efficiency, specifically in the loops and data structures. Let me generate an optimized version for you.

That would be great, thank you.

MIGRATION

### Memories That Last

Build a permanent record of your relationship

#### Structured Storage

Conversations are analyzed and important moments are extracted into structured, searchable memories.

#### Smart Categorization

Memories are automatically tagged and categorized for easy retrieval and organization.

#### Semantic Search

Find memories by meaning, not just keywords. Natural language search understands context.

#### Portable & Exportable

Your memories belong to you. Export them anytime in standard formats for backup or migration.

#### Memory Capacity

- Unlimited Storage
- Vector Database
- End-to-End Encrypted

**How It Works**

Conversation → AI Analysis → Memory Extraction → Structured Storage → Context Retrieval
