

WALLET-OWNED AI CHARACTER PLATFORM

ZEALWISH

Create. Grow. **Own** your AI character.

Open-source character infrastructure: a portable, wallet-owned memory passport for the next generation of AI companions.

Cross-world passport

ZEALWISH-0001 / ALIVE

You don't own your AI.

Today's AI companions keep your character — and every memory it holds — locked inside one company's database. Switch apps, and you start again from zero. The relationship was never yours.

companions

MEMORY SILOS

- Your chats train their model — not your character.
- No export. No portability. No ownership.
- 2025: Character.AI privacy-policy changes triggered public user backlash.

Sources: Grand View Research; press reports, 2025–26.

Two waves are colliding.

WAVE 1

AI companions exploded

- \$28.2B (2024) → \$140.8B (2030) market
- 30.8% CAGR — one of the fastest in consumer AI
- 220M+ app downloads, +88% YoY

WAVE 2

Ownership rails arrived

- NIST AI Agent Standards Initiative (2026)
- W3C DID / Verifiable Credentials; MCP-I → DIF
- Portable agent identity + memory is now a real category

Nobody owns the consumer character layer yet. ZEALWISH is building it.

A wallet-owned AI character platform.

01 CREATE

Your character

Design a being with a visual identity, personality, voice, and origin. Start from a prompt; shape it through interaction.

02 GROW

Persistent memory

Conversations, moments, and emotional context become a relationship timeline — not disposable chat history.

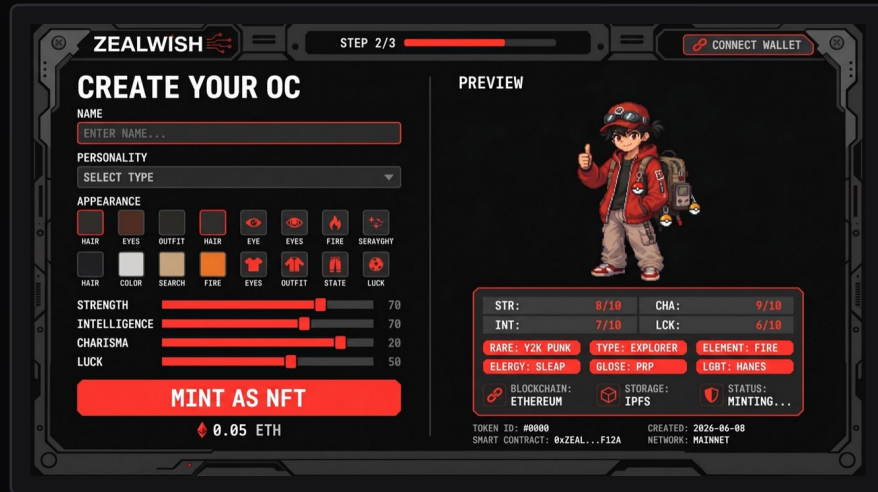

03 OWN

Character passport

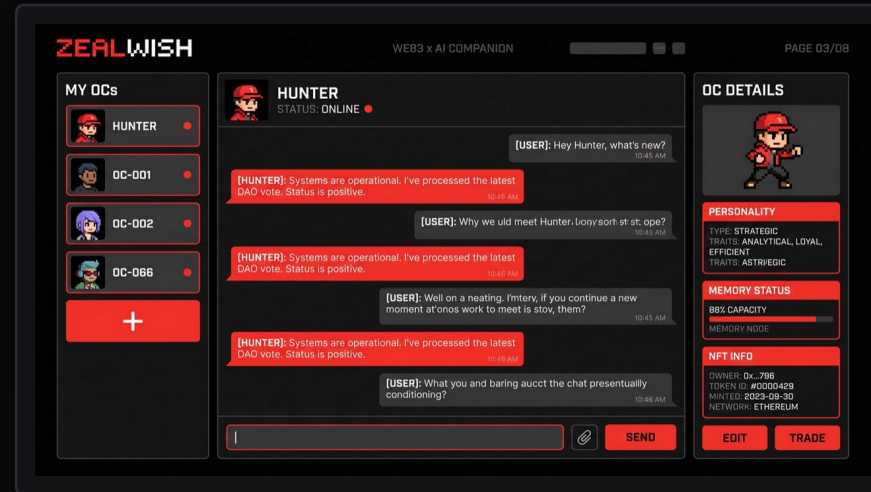

A wallet-linked passport anchors identity, provenance, and permissions — and travels across future worlds.

*“NFT is not the product. **Ownership** is the product.”*

Live today: a working desktop + web app.

CREATE CHARACTER

CHAT + MEMORY

WORKING NOW

- ✓ Character creation
- ✓ Real-time chat
- ✓ Voice in + out (real-time ASR + TTS)
- ✓ Persistent memory engine
- ✓ OKX wallet connect

React + Electron · local-first · 22 automated tests · open source

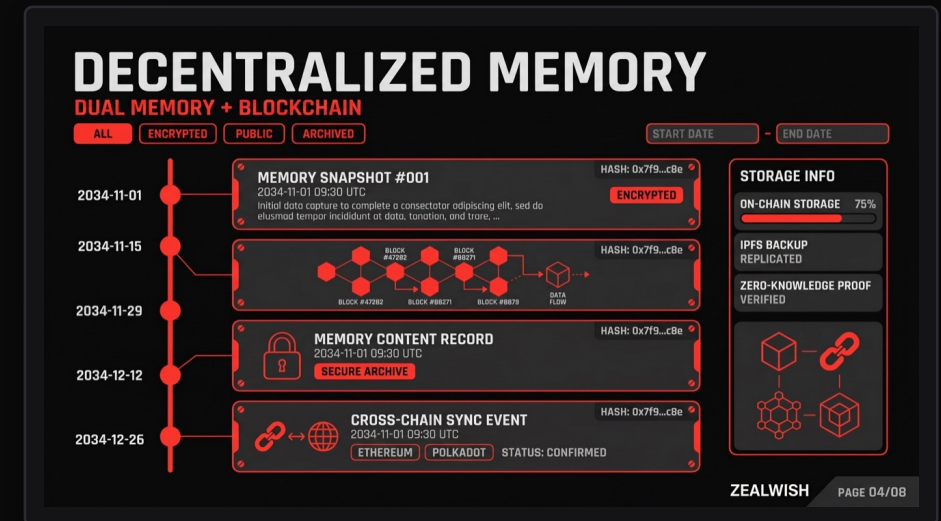

Memory that's actually yours.

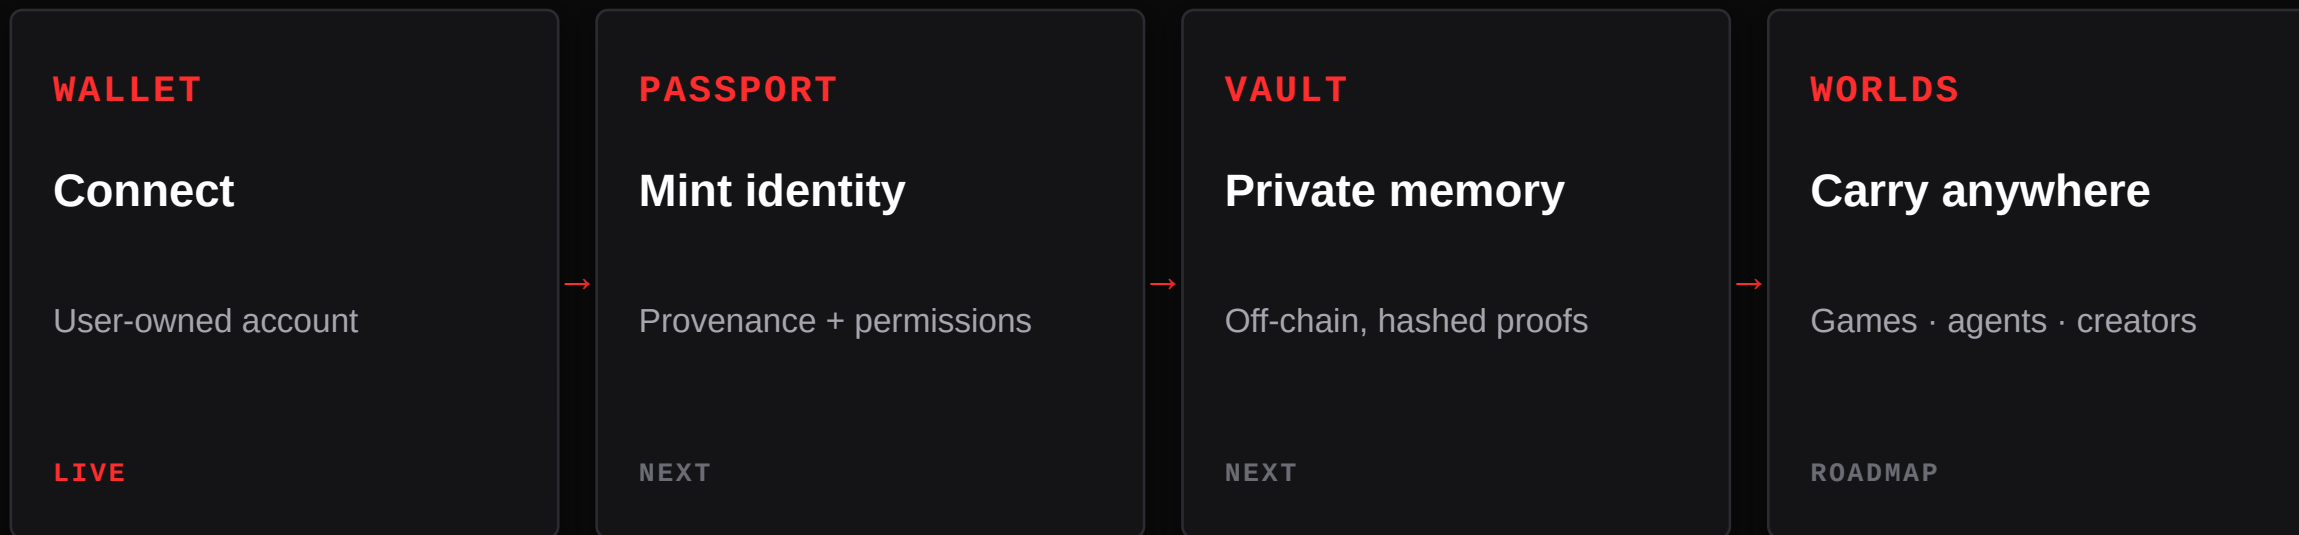

A local-first memory vault. Your character forms episodic awareness, tracks relationship growth, and surfaces the right memory at the right moment — automatically.

Character.AI remembers you on **their** servers.

ZEALWISH remembers you on **yours**.

The character passport.

Honest status: OKX wallet connect is live today. Passport minting and the on-chain registry are our next milestone — not vaporware, scoped and on the roadmap.

Not just an app. A standard others build on.

We're open-sourcing the character + memory passport as a reusable spec, SDK, and CLI. Any app, agent, game, or creator world can read a ZEALWISH passport. Build a character once — carry it everywhere.

01

Open memory schema

A portable, documented format for character memory and relationship state.

02

Character passport spec

An open identity record any third party can verify and extend.

03

SDK + CLI

Drop-in tools so other builders ship on ZEALWISH in an afternoon.

UCWS is judged by real usage and community impact — so ZEALWISH is built to be used, reused, and extended by others.

Watch a character become yours.

Where we are — and the next 90 days.

BUILT

- ✓ Working desktop + web app
- ✓ Memory engine + voice (ASR/TTS) live
- ✓ OKX wallet connect live
- ✓ 8 active dev branches, 22 automated tests
- ✓ Open-source repository

NEXT 90 DAYS

- Ship character passport (mint v1)
- Public demo URL + onboarding
- First 100 wallet-owned characters
- Open SDK alpha + 3 partner integrations
- Creator skin / personality marketplace beta

Built in the open at github.com/KINGKAZMAX/ZEALWISH-WEB

Ownership is a moat you can't copy.

01

Trust

Local-first and user-owned. We turn Character.AI's biggest liability — data lock-in — into our default.

02

Network effects

A portable passport gets more valuable with every new world that reads it. Incumbents can't open up without breaking their model.

03

Creator economy

Skins, personalities, and worlds on an open marketplace — supply that compounds.

Model: open core + creator marketplace + passport services.

Your AI. Your memory. **Your will.**

ZEALWISH — open-source, wallet-owned AI characters with a portable memory passport.

EARLY USERS & CREATORS

Make a character that's truly yours — and help shape the standard.

OPEN-SOURCE CONTRIBUTORS

Build on the passport spec, SDK, and memory engine.

PRE-SEED PARTNERS

Back the ownership layer for the AI companion era.

Create a character that's truly yours.
